FOR IMMEDIATE RELEASE

Accuracy X, Inc. Unveils Multi-Sight™ MAX System

Patented mount delivers ultra-low direct-mount depth with swap-anytime sight versatility.

Hardy, Va. (August 2026) – [Accuracy X, Inc \(AXI\)](#), the makers of the world's proven most accurate pistols, has introduced the Multi-Sight™ MAX System, a patented optic-mounting platform that pairs the ultra-low profile of a direct mount with the durability and configurability the company has built its reputation on. The new system expands, rather than replaces, the [original Multi-Sight System](#), which remains in production and fully supported.

Direct-mounting a red dot has traditionally forced shooters to trade away long-term reliability and versatility. The Multi-Sight MAX ends that compromise. At the core of the system is the company's patented Index-Recoil Lug, engineered to absorb the shear forces that break fasteners, destroy optics, and shift zero. The result is absolute zero retention across repeated plate changes.

The system's patent-pending Direct Depth Mounting System routes mounting screws directly into the slide instead of through a threaded plate, allowing Accuracy X to machine deeper pockets and seat

optics lower than conventional direct mounts. The resulting height-over-bore is the lowest achievable on a pistol slide.

Configurability comes from the SLOT Sight™ System paired with a new Rapid Change Interface, which lets shooters swap front and rear sight blades, from suppressor height to compact co-witness, without removing the red dot. A front-mounted co-witness option addresses snag concerns raised by some law enforcement agencies, and an integrated, ambidextrous slide racker rounds out a competition-ready feature set.

The Multi-Sight MAX supports the three most popular optic footprints, the Leupold DeltaPoint Pro, Aimpoint ACRO, and Trijicon RMR, which together account for about 95 percent of red-dot sights in use. Additional modules and accessories are planned.

“For years, shooters have had to choose between the ultra-low profile of a direct mount and the reliability and versatility of a robust system,” said Steve Huff, president of Accuracy X. “We refused to accept that compromise. The Multi-Sight MAX gets the dot as low as it can go and lets you tune your entire setup without ever touching your red dot. When excellent isn’t good enough, this is what comes next.”

Watch an in-depth technical breakdown of the Multi-Sight MAX system and discover how this low-profile, modular sight mounting platform revolutionizes versatility for handguns in the recent video “[The Ultimate Optic Solution: Deep Dive Into the Multi-Sight MAX System.](#)” The video discusses machining tolerances, optic compatibility, co-witness options, and why this system is changing the game for competitive and tactical shooters alike.

It is available now for licensed partners. Full specifications will be available at www.accuracyx.com.
